

IT Infrastructure Trends in State Transportation Agencies

As in many industries, the clear IT trend in state transportation agencies is to move workloads to the cloud – but what configurations best serve the priorities and organizational goals of agencies in this industry specifically?

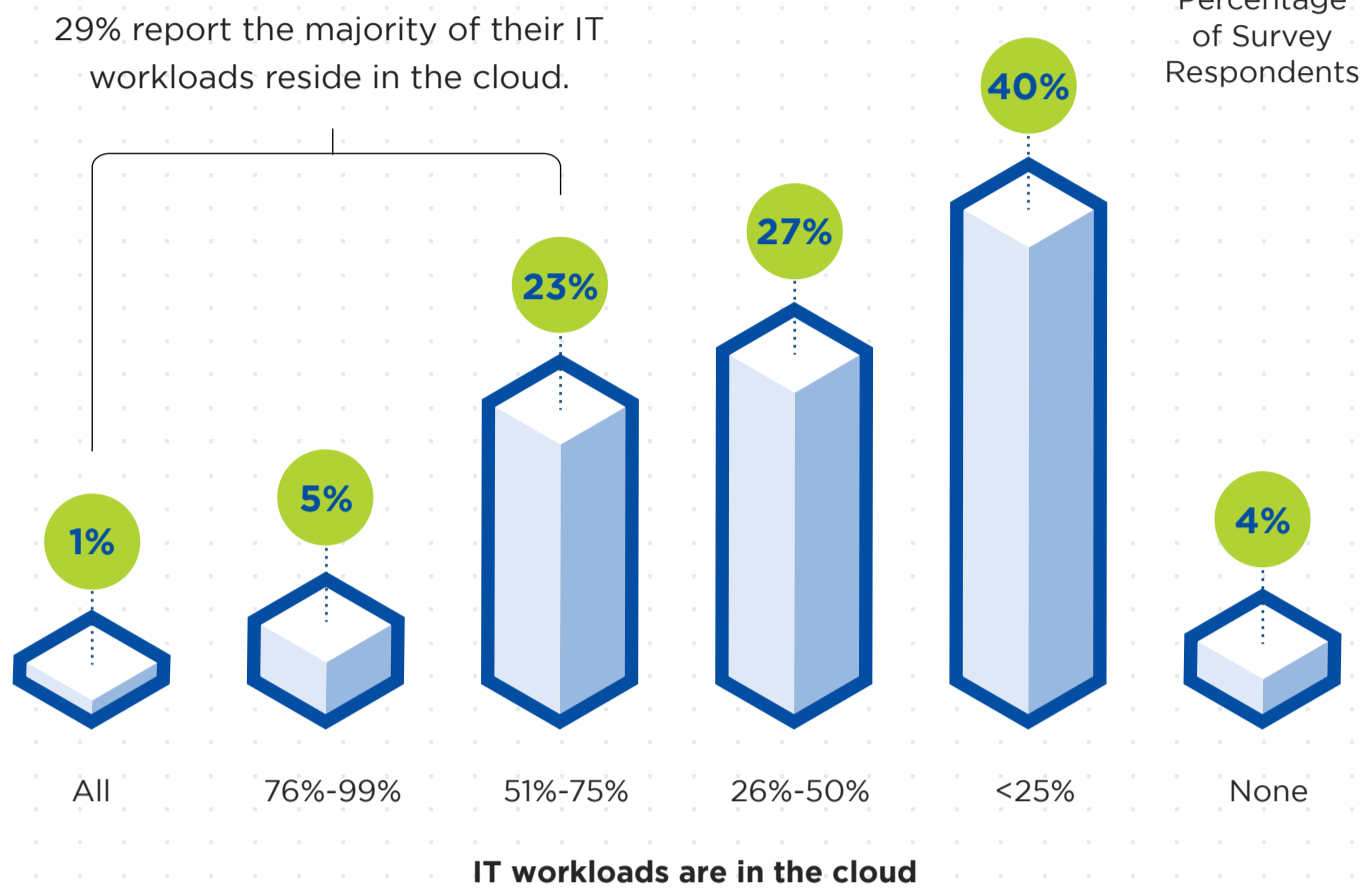

Gatepoint Research surveyed selected IT executives and individual contributors* to find out.

Cloud adoption is evolving

29% report the majority of their IT workloads reside in the cloud.

IT workloads are in the cloud

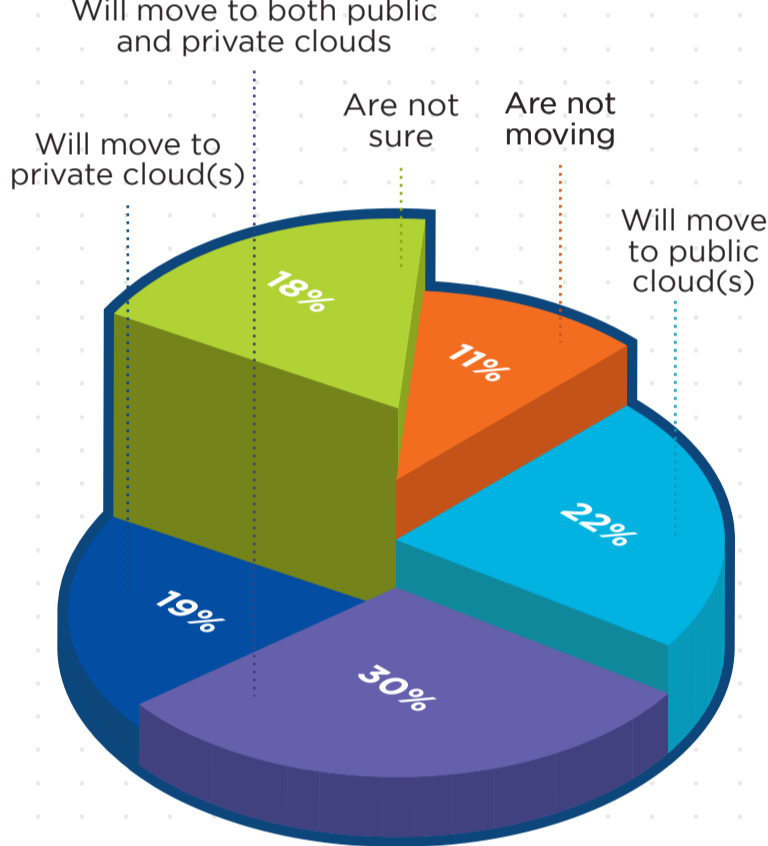

Hybrid cloud infrastructure is a popular choice

About half the organizations surveyed use both public and private cloud. Least common is a "public cloud only" configuration, used by only 18%.

More and more workloads are moving to the cloud

Moving on up: a commanding 71% of respondents are certain they will move additional workloads to the cloud within the next year and a half.

Cybersecurity is a top priority in the market

Top near-term priorities among respondents' organizations include better cybersecurity (68%), modernizing legacy applications (63%), and of course, reigning in costs (49%).

Work-at-home capabilities are essential

Pandemic-spurred remote work necessities have moved work-at-home capabilities to the top of the IT priority list, cited by 56% of respondents. Also high on the list: IT automation/self-service (50%) and business continuity/disaster recovery (47%).

About the company

With the current crises, IT teams are working 24/7 to accommodate citizen services, digitization, and WFH demands, all whilst experiencing revenue loss due to decreased ridership. It takes time to set up legacy infrastructure and maintaining it is even harder. The Nutanix industry-leading hybrid cloud software platform delivers a superior experience by simplifying the management of private, public, and distributed clouds with a single management plane. With native virtualization capabilities, application lifecycle management, one-click upgrades, and government grade security features, Nutanix enables IT to rapidly deliver against mission objectives.

*Across state transportation agencies, survey participants represented:

5% CxO or VP 15% Directors 37% Managers 43% Practitioners or Individual Contributors (i.e., IT specialists, Analysts, Administrators, etc.)
