BARON  BUDD[®]

Baron & Budd Solves IT Challenges with Nutanix:

- Achieved 20x faster eDiscovery processing, reducing the cost of litigation for clients
- Easily scalable systems provide the agility to accommodate fluctuating workloads
- Reduced cost of eDiscovery by moving the process in house
- Simplified day-to-day management and accelerated completion of IT tasks
- Enabled the firm to provide eDiscovery services to co-council firms

IT teams in the legal sector are under constant pressure to do more with less—while delivering the highest possible application availability, ensuring scalability, and keeping up with the latest technology. Busy legal teams need round-the-clock access to documents, and for today's legal staff, they need the same environment whether in the office or remote. Technology complexity should not distract them from billable business. Sometimes the situation can seem impossible to serve.

To address these challenges, law firms are increasingly turning to hyperconverged infrastructure (HCI) solutions. The Nutanix Enterprise Cloud Platform, the industry's leading HCI solution, helps you face these challenges head on and position your organization for a successful future. This allows you to deliver the services your firm needs to succeed today while innovating to address future requirements.

NUTANIX ACCELERATES IT MODERNIZATION

Complex, siloed IT environments are commonplace in legal firms and result in application and data silos that make managing these environments challenging. Many of these applications and data are spread across incompatible systems, which increases the complexity to get a full picture of your operations or build seamless end-to-end processes.

Modernization has become essential for law firms that want to decrease operating costs, use analytics to take advantage of business and case data, and increase technical innovation. Nutanix accelerates your modernization efforts with:

Hyperconverged Infrastructure

HCI converges the entire datacenter stack, including compute, storage, storage networking, and virtualization. Complex and expensive legacy infrastructure is replaced by a platform running on turnkey, industry-standard servers that enable enterprises to start small and scale one node at a time. Nutanix HCI software includes built-in virtualization, storage consolidation, data protection and disaster recovery, and more allowing you to focus on innovation.

One-Click Infrastructure Management

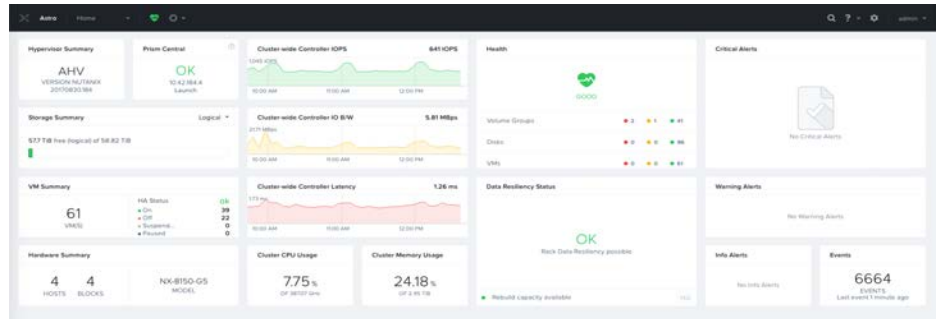

The Nutanix Enterprise Cloud Platform supports the entire software stack, streamlining common IT workflows and providing a single interface for managing servers, storage, data protection, and virtualization. With simplified management, IT teams can be more service-oriented focusing on business problems instead of spending time on deploying, managing, and supporting IT infrastructure.

KEY BENEFITS

- Streamline and automate management tasks to simplify operations and reduce or eliminate unplanned downtime.
- Deliver superior availability and performance for critical applications.
- Reduce costs with native virtualization and security built into the platform.
- Security is built in rather than bolted on, so your firm stays more secure with less effort.

REDUCE COMPLEXITY WITH:

- **One-click management.** Everything in your environment is managed through Nutanix Prism, our management solution, streamlining common IT workflows.
- **Support for leading applications.** Nutanix offers superior integration and support for all EUC/ VDI brokers, business-critical apps and databases such as Microsoft SQL Server, messaging workloads including Exchange, as well as ediscovery and other legal-centric workloads.
- **Greater operational efficiency.** By reducing IT complexity and simplifying management, Nutanix frees your team to focus on applications, IT enhancements, and innovation.

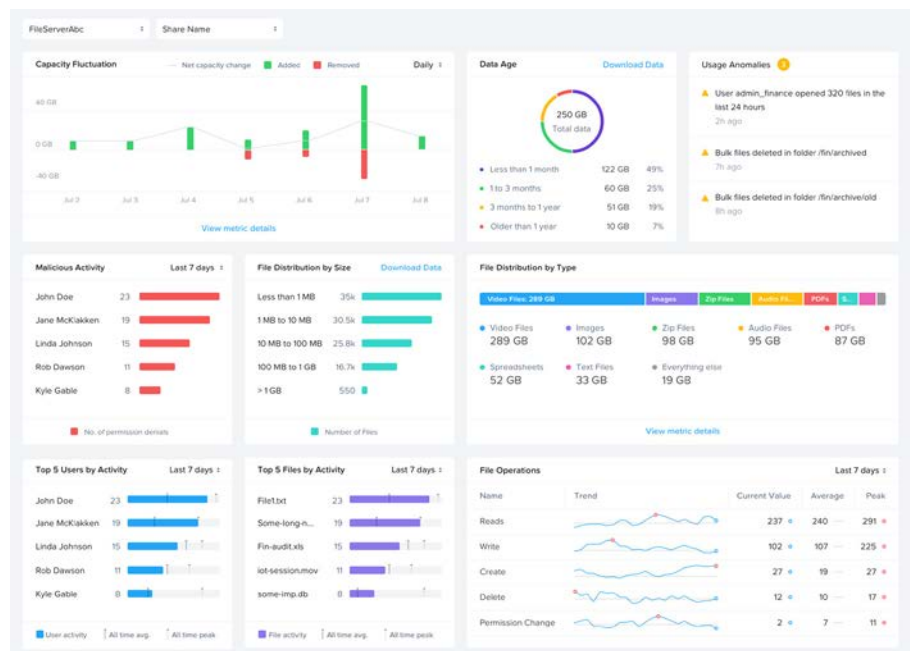

Nutanix Prism: One-click Infrastructure Management

Native, Built-in Zero-Cost Hypervisor and Security

Virtualization no longer needs to be a distinct layer of the IT stack that has to be licensed, deployed, and managed separately. Nutanix AHV is a native, no additional cost, enterprise-grade virtualization solution included with the Nutanix Enterprise Cloud Platform. Nutanix Flow enhances AHV to deliver application-centric security for VMs via visualization, microsegmentation, and network automation. To provide choice and flexibility, Nutanix fully supports industry-standard hypervisors, including ESXi and Hyper-V.

Consolidated Storage Silos

Traditionally, standalone network-attached storage (NAS) appliances have been the solution of choice for file server deployments across many legal firms. However, these deployments can be complex to set up and operate, require specialized skills, and create additional infrastructure silos. Legal firms are looking for ways to quickly add-in file service capabilities without creating yet another silo. Nutanix Files is a software-defined, scale-out file storage solution designed to address a wide range of use cases, including Linux support and Windows home directories, user profiles, and department shares.

Nutanix Files Analytics Dashboard

When dealing with client information, file security has to be top notch. File analytics is included with Nutanix Files. Our solution gives deeper insights and greater visibility into what and how users are accessing files.

Easy-to-Manage Remote Office and Branch Office (ROBO) Sites

Many legal firms require local print, active directory, and file server capabilities without the headache of complex environments. With Nutanix HCI solutions, you can use the same platform for storage and local workloads, eliminating the need for specialized software and hardware at your remote sites. Best of all, you can scale up and out as needs change.

Eliminate Traditional Cost and Complexity of Business Continuity

Most legal organizations have multiple tiers of applications, from business critical on down. In order to keep the firm operating, it's vital to have business continuity plans that include data availability with resilient, integrated backup and disaster recovery services. Nutanix Enterprise Cloud natively includes these services tied together through Nutanix Prism.

DESIGNED FOR DEMANDING WORKLOADS

Nutanix supports all your workload needs—from legal-specific applications such as Relativity, LexisNexis, Interwoven, and iManage, to messaging to document management to analytics—all on a single integrated platform. Once you choose the right datacenter architecture for your applications, you can easily expand to VDI and SQL Server workloads.

Built with the Remote Worker in Mind

The current work environment requires legal professionals to have the same secure access as in office or working remotely and across multiple devices. Traditional end user computing (EUC) environments—including both virtual desktop infrastructure (VDI) and desktop-as-a-service (DaaS) solutions—aren't up to the challenge of providing a modern experience. Nutanix solves these challenges by enabling you to run your virtual desktops and apps in the cloud or in the datacenter and achieve up to 8x faster end-user application deployments.

Simplify SQL Server Deployments

Nutanix Enterprise Cloud enables legal IT teams to consolidate all types of SQL Server databases and VMs—as well as other critical workloads—onto a single, high-performance platform that provides one-click simplicity, built-in data protection, effortless scalability, and non-disruptive upgrades.

TRANSFORM YOUR ORGANIZATION TODAY

Nutanix is a trusted partner for legal services, helping law firms transform their businesses. To learn more about how Nutanix can help your organization, take a test drive at www.Nutanix.com/Testdrive. You can quickly experience the simplicity and agility of public cloud combined with the performance, security, and control of private cloud via an easy-to-follow guided tour.
